DIGITAL COGNATE ANNOUNCES JOINT GO-TO-MARKET STRATEGY WITH DIGITAL CONTROL ROOM AS A FRONT-END INTEGRATION PARTNER

London: 11th January 2023

Digital Cognate is delighted to confirm a strategic partnership arrangement with Digital Control Room (DCR) and a joint digital-trust go-to-market proposition for complex audit, governance, and compliance applications.

DCR is a specialist technology provider in the regulatory compliance space and has developed 'Catalogue' - a centralised portal that scans, curates and collates all necessary asset data, providing organisations with a single view of complex, technical and operational assets across all projects, products, processes, and procedures.

The partnership means that DCR's Catalogue portal now provides front-end integration and user access to the Digital Cognate platform which then adds security, immutability, governance, and trust functionality. An innovative cloud-based approach to business transactions, Digital Cognate's technology ensures the integrity of complex data, securely linking and locking that detail within an immutable and full audit trail.

Digital Cognate ensures organisations have full control, complete transparency and absolute trust in the data that sits at the heart of the business. In addition, its back-end trust solution is especially attractive to users who want all the benefits of blockchain but without its limitations and so are looking for an alternative solution.

Steve O'Donnell, Digital Cognate CTO is excited about what this arrangement means for potential partners and clients within the trust technology sector: "With an innovative deep tech SaaS approach to provenance, trust, process and procedure, the combined Digital Cognate/DCR platform is ideally suited to complex multi-party ecosystems, securely holding and managing all data and process detail - *both in real-time for critical business decision-making, and as a permanent record* - for even the most thorough of audit, governance and compliance requirements."

Digital Control Room's CEO, Steve Hickey, commented ''We can see so much potential where Digital Cognate can enhance and add to our existing solution offerings. Their immutability, security and trust credentials and our accessible front-end cataloguing and workflow functionality really does make for an incredibly exciting regulatory compliance platform for the business of today."

About Digital Control Room

Digital Control Room is an independent, award-winning software company that provides automated solutions to the challenge of maintaining online compliance. Established in 2011, DCR's platforms scan a company's entire digital estate looking for incorrect, out of date, or potentially problematic content at a forensic level of detail.

Regulatory and compliance teams gain a deeper level of insight than ever before while digital marketing and content owners receive, review and respond to real-time compliance alerts.

Operating across multiple industry sectors including financial services, pharmaceutical, legal and hospitality, DCR has become a trusted partner to its clients and sets a new standard for online compliance, from boardroom to brand.
